TITLE **P.S. IHEARTU** Heart Monitoring Application

TAG: *Be Home, Without Being Alone*

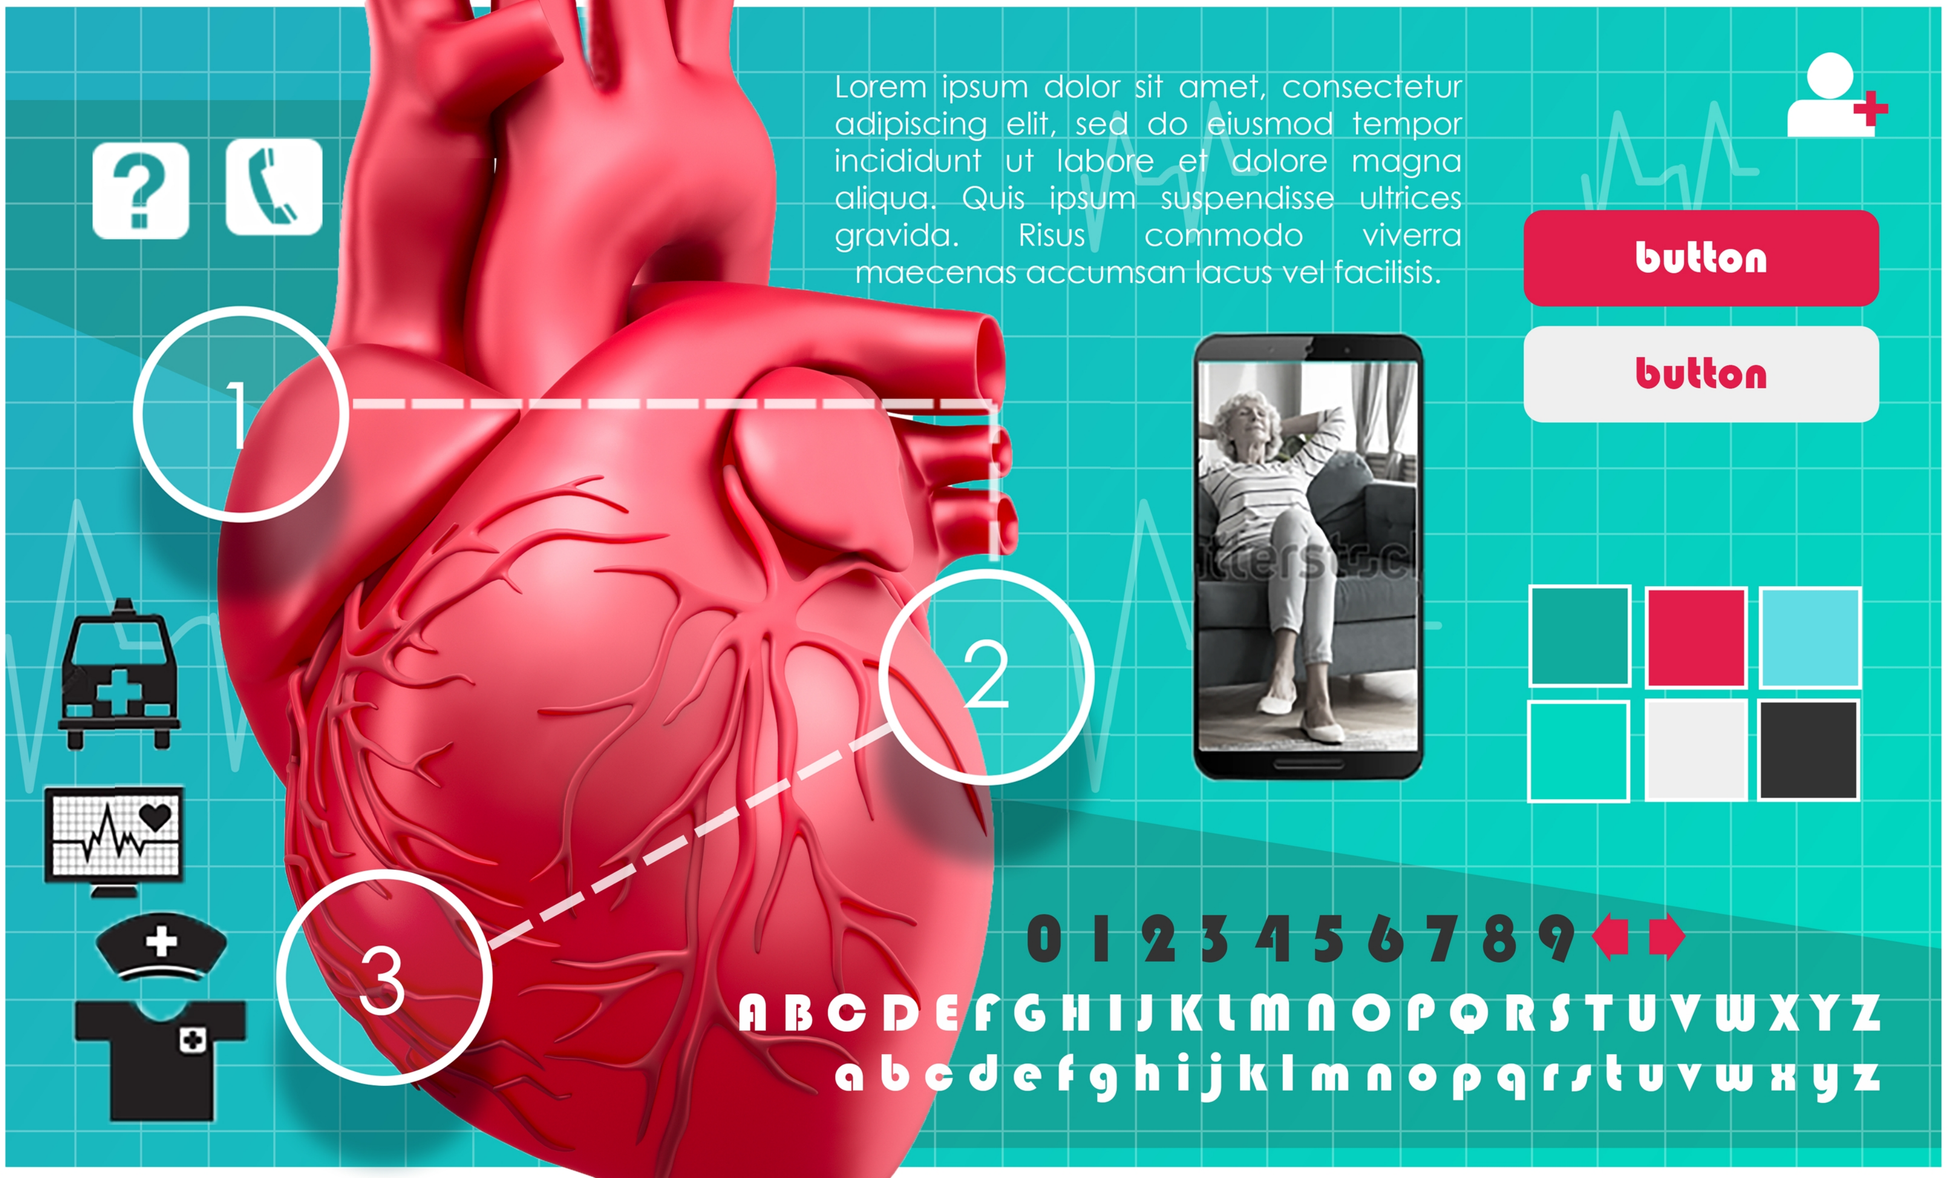

AUDIENCE: Sick or aging individuals living alone

DESCRIPTION: The **P.S. I HEARTU** smartphone application enables those with medical challenges to live life, confidently and independently. Using this application, users can invite loved ones to be automatically alerted via text of any potential health issues via their phone.

How it works: the user to be monitored applies the waterproof and shockproof monitor bracelet. The patient downloads the P.S. IHEARTU application and registers, creating a new account with unique I.D. The monitored user is then prompted to create a monitoring user group (including family/friends/peers) to download the application.

Once installed, any member of the circle receives notifications of any abnormal shifts in the monitored user's heart rate. The system can be configured to take different actions depending on the severity of the shift (e.g. send a text, request a response, contact 911, etc.)

The P.S. IHEARTU application is the perfect gift for sick or aging individuals, who want to maintain their independence, while ensuring their loved ones are always on call.
